EXPERIENCE

Software Engineer II

May 2022 – Present

WebstaurantStore

Atlanta, GA (Remote)

- Promoted from Software Engineer Intern to Software Engineer II while delivering enterprise applications for procurement, accounting, and corporate card operations on 10–15-person cross-functional teams
- Built and supported full-stack systems serving 600+ internal users and 4,000+ monthly transactions
- Led architecture and frontend implementation for Hatch, a procurement and onboarding application supporting thousands of monthly products, replacing Smartsheet workflows and centralizing third-party vendor integrations
- Built automated financial workflows for receipt and transaction management, OCR-based processing, and corporate card administration using .NET, React, PostgreSQL, and Azure Cloud, saving 100+ labor hours per month
- Improved production reliability across internal applications by optimizing caching, background messaging, and database performance with Redis and RabbitMQ
- Raised engineering standards by establishing React/.NET code patterns, reviewing PRs, maintaining 80%+ test coverage, and leading production hotfixes across business-critical workflows

PROJECTS

Brandon | *Next.js, Python, C#*

Feb 2025 – Present

- Spearheaded technical development with a 4-person team on an AI-guided trademark filing platform for small businesses using Next.js, Python, and C#
- Designed and developed resilient agentic systems for ingesting and storing millions of trademarks from the USPTO
- Deployed cloud inference pipelines for semantic and phonetic similarity search using open-source models

Randonaut | *C#, Unity*

Oct 2025

- Created a complete, top-down game in Unity with data-driven, ECS-based combat, assets, and content
- Developed reusable systems for gameplay logic, progression, enemy behavior, and user interface flows

Minecraft Mods | *Java, Kotlin*

2021 – 2024

- Published Minecraft mods including SpokenWord, MobMincer, and Craftonauts, with an emphasis on automation
- Reached over 5,000 total downloads across public mod projects

airSAFE Diagnostics | *C++, Arduino*

2017 – 2019

- Co-founded an LLC focused on portable air-quality sensing for precise CO2 and VOC detection
- Engineered and pitched a prototype with a \$1,000 grant from MIT at the Youthpreneurs Expo in Charlotte, NC, and LaunchX Regional Demo Day in Atlanta, GA

EDUCATION

University of Georgia

Aug 2019 – May 2023

Bachelor of Science in Computer Science

Athens, GA

- Charter Scholarship
- Honors & Dean's List

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL, Java, Kotlin, Go

Frameworks: .NET, React, Next.js, Django, Astro, Tailwind CSS, Unity

Tools & Platforms: Azure Cloud, Docker, Redis, RabbitMQ, MassTransit, MinIO, Selenium, Git

Databases: MSSQL, PostgreSQL, MongoDB
