EXPERIENCE

Software Engineer II

May 2022 – Present

WebstaurantStore

Atlanta, GA (Remote)

- Engineered full-stack enterprise applications for WebstaurantStore, the leading online restaurant supplier, to streamline procurement, accounting, and corporate card operations for 600+ internal users
- Led architecture and frontend implementation for Hatch, a procurement application supporting thousands of monthly products, replacing Smartsheet workflows and centralizing third-party vendor management
- Built automated financial workflows for receipt management, OCR-based processing, and corporate card administration using .NET, React, PostgreSQL, and Azure Cloud, saving 100+ labor hours per month
- Improved production reliability for systems processing 4,000+ monthly transactions by optimizing caching, background messaging, and database performance with Redis and RabbitMQ
- Raised engineering standards across 10–15-person cross-functional teams by establishing React/.NET code patterns, reviewing PRs, maintaining 80%+ test coverage, and leading production hotfixes
- Demonstrated continuous technical growth and system ownership, resulting in promotions from Software Engineer Intern to Software Engineer II

PROJECTS

Brandon | Next.js, Python, C#

Feb 2025 – Present

- Acted as Lead Developer / CTO for a 4-person team on an AI-guided trademark filing platform for small businesses using Next.js, Python, and C#
- Designed and developed resilient agentic systems for storing and utilizing millions of trademarks from the USPTO
- Deployed inference pipelines and a Milvus vector database on AWS for semantic and phonetic similarity search using open-source models

Randonaut | C#, Unity

Oct 2025

- Created a complete, top-down game in Unity with data-driven, ECS-based content, and AI-generated assets
- Developed flexible, reusable systems for gameplay logic, progression, enemy behavior, and user interface flows

Minecraft Mods | Java, Kotlin

2021 – 2025

- Published Minecraft mods including SpokenWord, MobMincer, and Craftonauts, with an emphasis on automation
- Craftonauts uses generative AI to create seamless and unique content in real time during gameplay
- Reached over 5,000 total downloads across public mod projects on Curseforge and Modrinth

airSAFE Diagnostics | C++, Arduino

2017 – 2019

- Co-founded an LLC focused on portable air-quality sensing for precise CO2 and VOC detection
- Engineered and pitched a prototype with a \$1,000 grant from MIT at the Youthpreneurs Expo in Charlotte, NC, and LaunchX Regional Demo Day in Atlanta, GA

EDUCATION

University of Georgia

Aug 2019 – May 2023

Bachelor of Science in Computer Science

Athens, GA

- Charter Scholarship
- Honors & Dean's List

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL, Java, Kotlin, C++

Frameworks: .NET, React, Next.js, PyTorch, Transformers, Django, FastAPI, Astro, Unity

Tools & Platforms: Azure Cloud, AWS, Docker, RabbitMQ, MassTransit, MinIO, Selenium, Git

Databases: MSSQL, PostgreSQL, MongoDB, Redis, Milvus
